ABSTRACT

In this article, some of Iran (and my) scientific problems were mentioned. It was concluded that Iran and I will not become anything in the science, I have no intelligence and Iran and I will not become anything in general. Therefore, according to the principles of Depressive Realism, I must always be happy. Also, it was deduced that the only way for the scientific advancement of Iran is to make Iran a state of USA.

KEYWORDS: *Politics, Jealousy, Depressive Realism, Industry*

INTRODUCTION

Voice of America (VOA Persian) has issued an article [1] that is in the same line with this paper. In fact, that article from VOA Persian confirms this paper. Also Eminent Crown Prince of Iran, Reza Pahlavi has a saying from Atamalek Joveini about Iran Islamic Regime as “They came and dug and burned and killed and took away and went” [2] which approves this paper.

DISCUSSIONS

I have previously said that a large part of discovered science is kept secret and is not in public access [3 to 13]. This fact is exactly mentioned as a world problem in “Encyclopedia of World Problems and Human Potential [14]” as “A considerable amount of scientific research is conducted in institutes or under contracts which preclude dissemination of the results to other than a select group [15]”. This fact was first given by my university professor Mohammad Jamialahmadi during the courses with whom I had these courses. He was known as the scientific pole of the university and his resume can be found in internet [16]. Therefore, we can see that Iran cannot solve many scientific problems which have been previously solved by superpowers and many years ago. As an example NIOC (National Iranian Oil Company) has officially published the list of its priorities of Research Opportunities (SABBATICAL LEAVES)[17, 18, 19 and 20]. It is a great list of Iran scientific problems. These are scientific problems of Iran which I and Iranians cannot solve them. It should be noted that all of these scientific problems have been previously solved by superpowers and many years ago but they have not given those sciences to public access. Anyway those who have created such Research Opportunities (SABBATICAL LEAVES) do not know that a large part of discovered science is kept secret and is not in public access. They think that universities are the great source of science and they can solve any scientific problem with universities. If the superpowers wanted to give those sciences to public access and if Iranians were going to reach those sciences, then superpowers would present them completely at universities (or other references like books, internet and etc.) instead of time consuming absurd courses which are taught at universities and there would not be any need for research works by universities like Research Opportunities (SABBATICAL LEAVES). In this way we can see that Dear Eminent Mr. President Donald J. Trump has

recently signed an executive order changing federal hiring practices to prioritize job skills over college degrees [21]. This fact is true for other research priorities that I have mentioned previously [13]. People may claim that they can handle some of these research problems at Iran universities and scientific institutes but their work is neither scientific nor fundamental and instead is botch and bungle which has no scientific value. Anyway universities are waste of time and in the case of Iran are established to make people busy with science for them not to think of important things like politics. If you look at these lists and those in my previous paper [13], one will find that still there are lots of JACKASSES in Iran who do not know that universities are established to make people busy with science for them not to think of important things like politics and they prevent progress and that only a small part of superpowers sciences is presented at universities. I know the conditions of many of such research projects by universities. For example, The Ferdowsi University of Mashhad made a contract with East Oil and Gas Production Company to study the necessity for injection of corrosion inhibitors inside sour gas wells. These corrosion inhibitors were imported to Iran and were very expensive. They used HYSIS software to determine the flow regime inside gas wells and to predict if there is liquid water inside gas well or not. If there was liquid water inside gas wells, then there would be corrosion. This project was very costly and evens the company shut down a well and pulled out the tubing's of that gas well to see the corrosion of it. In summary, they concluded that there is no need for injection of costly corrosion inhibitors inside the gas wells. They published their work as a book and submitted it to East Oil and Gas Production Company. But the company continued buying, importing and injection of that costly corrosion inhibitors inside sour gas wells. It means that the result of that research project was absurd and that research project was botch and bungles and was not acceptable by the company. That project was not scientific. As I remember, The Ferdowsi University of Mashhad got about 36000 USD from the company for doing this project before 2010. I was not involved in that project but I studied the book of the project and I derived a paper from it titled "Studying the Performance of API 5CT-L80 Type 1 Steel in Tubing's of Sour Gas Wells using HYSIS Software "in 13thMiddle East Corrosion Conference & Exhibition, Manama, Bahrain in 2010[22]. This article was also absurd and was botch and bungle according to the above illustration. Anyway I will not do any research project in the future and I will not write such technical and research articles in the future since they are absurd and are waste of time and have no scientific value. I have said that these scientific problems of Iran previously and many years ago were solved by superpowers. As an example from the above lists, I can mention the intelligent pigs which Iranians cannot make it. Intelligent pigs are nothing new and extraordinary since it was first run by SHELL DEVELOPMENT in 1961 [23]. In general, oil and gas industry is nothing new and extraordinary since for example UK has constructed the Abadan Oil Refinery in 1912 [24].

Also if you search in internet, you will find many valid websites for Iran international tenders [25, 26, 27, 28 and 29]. This great number of tenders is for commodities (goods) that Iranians cannot make and services which Iranians cannot provide. In fact, Iranians want to import these commodities (goods) and services. If Iranians could supply those commodities (goods) and services in Iran, then they would not allow foreign countries to supply those commodities (goods) and services and would supply them from Iran. These tenders are in different fields including oil and gas, steel, mining and engineering, automotive, agriculture and etc. These are scientific problems of Iran which I and Iranians cannot solve them. It should be noted that all of these scientific problems have been previously solved by superpowers and many years ago but they have not given those sciences to public access.

Furthermore, Iranians have not yet innovated any car. The only national car of Iran as SAMAND uses the parts of PEUGEOT. Other present cars in Iran are innovations of foreign companies like SUZUKI, MVM, KIA, NISSAN, CHERY,

PEUGEOT, RENAULT, TOYOTA, BENZ, BMW and etc. It should be noted that innovation of car is nothing new and extraordinary and for example JEEP from USA has innovated and made its first car known as WILLYS QUAD in 1940 [30].

In addition, Tabriz Oil Refinery has officially published the list of its research priorities [31]. These are scientific problems of Iran which I and Iranians cannot solve them. It should be noted that all of these scientific problems have been previously solved by superpowers and many years ago but they have not given those sciences to public access.

Figure 1 is from BABYLON PICTURE DICTIONARY for crazy. He spins his finger around his ear to say that you are crazy. Also, he mocks everybody. He escapes since the people make him crazy. He uses magic to produce illusions and hallucinations. BABYLON PICTURE DICTIONARY is a valid, reputable and top international dictionary. Now I suppose that you could send me to madhouse. But the world understands that you, yourself are crazy. The following photo from BABYLON PICTURE DICTIONARY shows this fact very good. According to the principles of DEPRESSIVE REALISM, the reason why intelligent people catch mental disorders is that all the people are jealous of such minds and therefore try to make a mental disorder for those intelligent persons and try to destroy those minds. This is because people think that everything is brain and science and they are the most important things. The people think that if they have brain and science, then they will reach everything. This is completely wrong in Iran since the most important thing is politics in Iran because money, power and other benefits of political activities is extremely higher than any other activities in Iran. For example, as I have previously mentioned [32], the worth of Khamenei as Iran leader (200 Billion USD) is approximately twice more than the worth of richest person in the world as Mr. Jeff Bezos (108.6 Billion USD). Furthermore, Khamenei has control of Iran military and for example guns, missiles, war aircrafts, bombs and so on which Mr. Jeff Bezos does not have them. People cannot withstand and bear that a brain works so well and try to make a mental disorder for that intelligent person. It is to say that the intelligent people are mentally ill and in this way they appear crazy. These mental disorders are made to show that intelligent people seem crazy. People make mental disorders for intelligent persons to say that do not be honored of your brain since the psychological facts show that you have a mental disorder. But all the world knows that those who make these mental disorders are crazy themselves. The age of such frauds is over. The following photo from BABYLON PICTURE DICTIONARY shows this fact very good. Beside political reasons, one reason why I have written this article and my previous papers [3 to 13] was to say that I will not become anything in the science, I have no intelligence and I will not become anything in general. This is because a large part of discovered science is kept secret and is not in my and public access [15]. Therefore, do not be jealous of me, my science and my brain. So, I must be happy according to the principles of DEPRESSIVE REALISM. Anyway the people say that I have schizophrenia and my manuscripts of psychiatrist are in my website [33 and 34]. Making a mental disorder for somebody is against the HUMANITY.

Figure 1 shows Also I have previously said why Iranian women are very beautiful and why men in foreign countries remove their body hair. Those reasons were wrong and I don't know that reason.

I am a sick and very poor man. I requested Dear Eminent Mr. President of USA Donald J. Trump, Her Highness Mrs. Ivanka Trump and U.S. VIRTUAL EMBASSY IRAN to send me money. I know that they control many charity organizations worldwide. I need a monthly basic income to survive. I have created a Web Money (Web Money is an online payment settlement system) account for financial aid to receive. The purse number is Z291871883734 and is in my name. Financial aid from any other sources is also greatly appreciated. For financial helps from Iran, my card number in TEJARAT BANK is 5859831150971751.

Figure 1: Babylon Picture Dictionary For Crazy.

CONCLUSIONS

The only way that I strongly suggest for the scientific and economic advancement and development of Iran in all fields (including politics) is to make, regard and announce Iran as a state of USA (United States of America) officially and politically (and totally). I.e. Iran should make and regard itself as a state of USA (United States of America) politically (and totally). I have heard that this idea was first suggested by His Majesty Mohammad Reza Shah Pahlavi for Iran. I have created a petition in internet [35] for everybody to sign it and to make Iran a state of USA. So please sign this petition.
