ABSTRACT

The present study on Koha and LIBSYS respectively have been undertaken both library management software's are good but there is a scope for improving also in both softwares. From the study we found that many features from Koha are better than the LIBSYS such as portability, report generating time, field length of titles, OPAC which provides options for user suggestions, comments, and tags. But LIBSYS also has its own features like article indexing system, service of customization, maintenance and security of data is provided by the vendor or local service providers.

KEYWORDS: Library Automation, Open Source Software, KOHA, LIBSYS
