ABSTRACT

Safety Management, Safety Climate, Safety Performance In the twentieth century, as technology grew by leaps and bounds; associated hazards also grew with it. This resulted in collective efforts and thinking in the direction of controlling work related hazards and accidents. Thus, safety management developed and became an important part of industrial management. While considerable research has been reported on the topic of safety management in industries from various parts of the world, there is scarcity of literature from India. It is logical to think that a clear understanding of the critical safety management practices and their relationships with accident rates and management system certifications would help in the development and implementation of safety management systems.

KEYWORDS: Safety Management, Safety Climate, Safety Performance, Work Related Hazards.
